ANALYSIS

- **CHI was best when they shot within the first 6 seconds of the possession. However, last season, they attempted nearly half of their possessions in the 15-7 second range on the shot clock, in spite of the lower efficiencies. SPEED UP THE OFFENSE!**

EXPLANATION OF ON/OFF SPLITS CHART

This is my absolute favorite statistic... it measures how the team performs with a player on the court compared to how the team performs with that player on the bench.

For example, according to the data, when Nikola Mirotic plays, Chicago scores 107.9 points per 100 possessions. When Mirotic sits, CHI scored 107.1 points per 100 possessions. Mirotic makes the Bulls offense approximately 0.8 points better per 100 possessions.

Moreover, when Mirotic plays, Chicago's defense also allows 102.4 points per 100 possessions. When Mirotic sits, Chicago's defense allows 105.4 points per 100 possessions. Mirotic makes the Bulls defense approximately 3.0 points better per 100 possessions.

Chicago's lineups with Mirotic outscored opponents by approximately 5.5 points per 100 possessions. Chicago's lineups without Mirotic outscored opponents by only 1.7 points per 100 possessions. So Mirotic helps the Chicago offense score points and limit opponents points efficiently. Therefore, Mirotic is actually a net-positive of approximately 3.8 points per 100 possessions for his team when you account for both his offensive and defensive efficiencies.
